Dear Dr. Cui,

I am pleased to inform you that Huawei Theory Research Department has decided to confer the "Best Collaborating Scientist Award 2021" on you. **Theory Research Department (or the "华为中央研究院理论研究部" in Chinese)** is our company's strategic research department on conducting information theory, optimization, and system research with worldwide competitive universities and their professors.

The reason we confer this award on you is that, during our flagship research project "A Blockchain-powered, Trustworthy Internet Layer (System) and its Decentralized and Efficient Applications" from 2018 to 2020, your HKU research team has collaborated with our researchers to jointly publish a series of research papers on blockchain and security in international top venues (e.g., ACM SOSP 2021 and IEEE TDSC 2021) and to jointly apply for seven patents. A secure big-data computing system developed in these papers has been successfully commercialized as a key service in our Trusted and Intelligent Cloud Services (or TICS, <https://www.huaweicloud.com/product/tics.html>). Stemming from these papers, now we are also collaborating with you to work on other systems (e.g., DAST and BIDL, two distributed transaction/blockchain systems) with commercialization potential.

We will arrange the presentation of this award's medal to you in our Huawei HK Science Park branch soon. Congratulations.

Best wishes,

Bo Bai

Director of the Huawei Theory Research Department

Nicholas Gong ZHANG

Chief Scientist of the Huawei Theory Research Department
