7/F Shui On Centre, 6-8 Harbour Road, Wan Chai, Hong Kong

Dear UGC Secretariat,

I, on behalf of Huawei Tech. Investment Co., Limited (“Huawei”), hereby confirm our interests and support for the RIF proposal entitled “MindPipe: High-performance and Carbon-efficient Four-dimensional Parallel Training System for Large AI Models”. In Aug 2021, through a collaboration research project agreement signed between HKU and Huawei, Dr. Heming Cui’s team has been collaborating with us on developing new high-performance training systems for large AI models. From this collaboration project, Dr. Cui and his PhD students have collaborated with us to publish two international best-tiered research papers (i.e., China Computer Federation A-class papers), including [vPipe IEEE TPDS 2021] and [NASPipe ACM ASPLOS 2022]. We will support the MindPipe proposal in three aspects.

- (1) We will be happy to offer research intern scholarships for Dr. Cui’s PhD students. Based on our collaboration research papers, these students will work on applying the research prototype within our company. For now, two PhD students supervised by Dr. Cui are already working as research interns in our company.
- (2) We will collaborate with Dr. Cui’s team to jointly apply for patents based on our collaboration research papers. So far, we have jointly submitted four patent applicants according to our collaboration project agreement signed in Aug 2021.
- (3) We will be happy to help Dr. Cui’s team set up the real-world training workloads of worldwide general large AI models. Such realistic workloads may help our collaboration project with Dr. Cui’s team to publish more research papers in international top conferences/journals by showing convincing evaluation results.

Sincerely,

Name: Matthew Leung
